

Sustainability at **Arnold & Porter**

Over the past 3 months Arnold & Porter and Flik have increased their efforts to create a more sustainable work place.

What does that look like?

Our food recycling program has composted 5,000 pounds of food in 3 months

This creates high nutrient soil that use less fertilizers, reduces greenhouse gases and can even remediate contaminated soils

The omission of straws in pantries has already decreased consumption by 7,000 straws

In 3 years that will equate to 45 pounds of plastic, a 50% reduction

Our food donation program has fed over 300 people in need in 3 months

Any food that can be consumed by others is donated to the central union mission

Vivreau water bottles have decreased bottled water consumption, accounting for over 100 pounds of plastic in 3 months

8 million metric tons of plastic make it into our oceans each year. We are now seeing plastic throughout our biodiversity, even in our food sources
